

DR. AMY ESKRIDGE: The DEATH of a promising ANTI-GRAVITY researcher

conspiracy

Commando 1 May 22, 2024, 3:48pm

Conducting anti-gravity research? You probably work in Huntsville, cease publishing after a first promising result, and are “afraid of disappearing.” Sometimes, you do actually disappear.

Original Post: <https://archive.is/O3Pgg>

Most of [/r/UFOs](#) has probably not heard of **Dr. Amy Eskridge**. You should. This post is long, but this is a rabbit hole worth going down. Amy was an amazingly promising 34-year old woman working in **Huntsville, Alabama**, and **was one of the worlds most promising anti-gravity researchers in the public domain**.

She unfortunately died on June 11, 2022.

There have been major speculative claims surrounding how exactly Amy died. I do not have any evidence to support those claims. I don't even personally find those claims believable. I do, however, suggest it might be worth taking a second look into how she died, and exactly what is going on relating to anti-gravity research Huntsville, Alabama. Ross Coulthart appears to agree. Below is my initial research into this topic.

Background facts about Amy Eskridge:

- Amy received BS in chemistry and biology from the University of Alabama, Huntsville, and then went on to receive a PhD in material science from the University of Alabama, Huntsville.
- She was the co-founder and President of **The Institute for Exotic Science**, a Public Benefit Corporation international research institute, described by [Am](#)

herself as “an international research institute specializing in propulsion, **quantum gravity**, material science and other related fields of cutting edge technology.”

- She was the CEO and President of HoloChron Engineering, an **anti-gravity startup** “developing novel technologies leveraging quantum phenomenon. HoloChron’s specialties are listed as: “Superconductors, Gravitomagnetism Research and Development, Electroceramics, and High Voltage Pulsed Power.”

Most notably from those points, at the time of Amy’s death she had started “**The Institute**” which was a high-caliber research institute intending to **research anti-gravity technologies in public**. She notably was **intentionally not working on anti-gravity as part of a “black project,”** or through the DOD/DARPA or even NASA (although they partnered with NASA). This was because she wanted the technology to be public, benefit all of humanity, and thought there was massive world-changing potential from a variety of promising research.

Amy’s 2018 HAL5 Presentation:

When Amy was initially starting “The Institute” she gave a talk about it at the HAL5 conference. The full set of slides from her presentation are available here, and you can watch a video of her presentation in full here. It’s a very interesting presentation, and makes a compelling case for anti-gravity research having some promise. There are a few key specific call-outs in this presentation that are worth noting.

- **The audience of her presentation appears to be mostly composed of aerospace research scientists, people who work at defense contractors, NASA, and the like.**
- **The intent of the presentation** was to make her institute known to the audience, to **try to recruit them to come conduct research for her**. Towards the end of her presentation she spends a lot of time detailing how she has “several billionaires” lined up, prepared to fund a wide variety of anti-gravity research in the public domain. She was using those funds to to

recruit scientists to come work for her.

- In her presentation Amy details a variety of prior anti-gravity research. She specifically notes that these researchers **published initial promising anti-gravity research in the public domain**, and appear to **stop publishing on the subject immediately following their first promising result**.
- **“Promising results always seem to disappear”** (40:03)
- Amy calls out a prior **Huntsville, AL** based anti-gravity researcher named **Ning Li** who had been publishing **promising anti-gravity results in the 1990s, and then “disappeared.”**
- She presents some prior researchers’ work on anti-gravity, for example, noting a 2001 publication by “Torr, Vargas and Datta” that looked promising. The audience comments “I think they got some **SBIRs**... and then they disappeared.” to which Amy responds, **“yeah there’s some evidence that they got some funding through a **SBIR** and then they kind of just fell off the map just like Ning Li did.”**
- She presents a variety of other research where typically what happens is there is an initial, promising anti-gravity result published in academia, after which the researcher stops publishing on the subject entirely. There seems to be a pattern of that happening.

While notable, the commentary from the audience is more interesting than the actual presentation from Amy herself. She had a Q&A section of the presentation at the end. I have transcribed some key Q&A moments from the audience below. The audience implies the “black-world” (secret research projects) is well aware of anti-gravity, spends a ton of money researching it, and basically forces any promising results to go dark/recruits the researchers to work for the “black world.” If the researcher refuses, the audience seems to think the researcher runs a real risk of “disappearing.”

2018 HAL5 Presentation Audience Q&A portion:

- **Audience:** (55:28) “You talked about funding, and uh, that seems to be the common denominator in all this stuff. Funding or lack of. Who is... where is there any money that you know of? Are you aware of any private money

that's being spent on this? Is anyone talking to angel investors, or, that sort of stuff?"

- **Amy:** (55:50) "Let me give you the down-low on the money situation. So, **you've got your black budgets. That obviously is well funded.** And then you've got your **academic budget which is non-existent because they think it's hokey.** And then you have your **random billionaires**, who have a hobby, and they made their money doing something else. But they're applying their money towards weird anti-gravity stuff because they want to be known for something other than what they made their money in. So there's several, there's a handful of random billionaires running around, who fund these types of things. The Churches Chicken Fried billionaire funded the Hathaway Lab. The American Best Inn and Suites billionaire, Robert Bigelow, of course is Bigelow Aerospace. There are some others that I know of."
- **Amy:** (56:42) "But, we're really trying to address that problem with The Institute that we're doing, because I've seen government research, I've seen academic research, I've seen private research, and money is always the problem. **The technology is never the problem. The technology is there. And the talent is there.** So what we've done with the institute is we've sort of assembled some of these random people, with big budgets and a hobby, and we've said 'hey can we pool money into a big stable pot of money' so that we can have a safe well-funded sandbox for smart people to play in, and not have to worry about government election cycles affecting their budget, or tenure affecting their budget, or even when you find your billionaire sometimes the billionaire runs out of money, or loses interest, or disappears. So you can't just be dependent on one wealthy investor. You need a big pot of money that's stable, that isn't going anywhere. So that's what we're trying to do with the institute. Just fund the institute. And then pick projects that we think are promising, and then fund those. So we're kind of creating a new vehicle for funding this type of research. That's the approach I'm taking right now?"
- **Audience:** (58:08) "**Is there any possibility of... I know this is probably hard, if not impossible to do... but cross-over between black-world and the illuminated world? Because frequently things move from the illuminated world into the black-world. And they disappear.**"

- **Amy:** (58:26) **“Yeah. We’ve noticed that.”**
- **Audience:** (58:30) “But, I mean it’s to the black-worlds advantage to keep the illuminated world going, because, that acts as a spawning ground for ideas that they might not have. The black world. So, it’s **not necessarily to their advantage to keep it completely stagnated.** And potentially, since **Griffin is now at the pinnacle of the group that controls DARPA, and he has a history that goes through UAH,** there would seem to be possibly some fertile ground for some conversation...”
- **Amy:** (59:16) “Yeah, um, I’ve thought about that. The combination of the private and the public-private institution, and working with the ‘blacker budget.’”
- **Audience:** (59:31) **“A quote from Griffin. ‘NASA is no longer, by any means, a research organization.’”**
- **Amy:** (59:39) **“That is a Griffin quote.”**
- **Audience:** (59:41) **“Yeah, that is a Griffin quote.”**
- **Amy:** (59:45) “Yeah, I imagine there are some string opinions about Griffin in the room.”
- Stuff gets awkward in the audience at this point, and Amy moves onto talking about corporate structure and why it’s structured the way it is.
- **Audience:** (01:04:28) **“SO WHAT ABOUT THE INNOVATOR WHO IS AFRAID OF DISAPPEARING?”**
- **Amy:** (01:04:31) **“Well, that’s a whole ‘nother problem. *audience laughs* I think doing it in the public is better in that case. That’s a different...”**
- **Audience:** (01:04:44) **“That doesn’t mean you won’t disappear. Even if you do it in the public, that still don’t mean the inventor won’t disappear for lots of reasons.”**
- **Audience:** (01:04:55) **“Like Ning Li!”**

A few takeaways from this 2018 HAL5 conference audience Q&A:

- Both Amy and the audience imply, repeatedly, and take very seriously as if it’s a **“known-secret” amongst those in the know, that anti-gravity research moves from the “illuminated world” (public research) to the “black-world” (secret project) on this subject all the time,** but

not the opposite direction. They even reference the **black world keeping the illuminated world “completely stagnant.”**

- Amy implies states that the “black-budgets” in this area of research are well funded. So the government is working on this, actively. Which government organization has a headquarters in Huntsville, AL? NASA.
- The audience states “frequently things move from the illuminated world into the black-world. And they disappear,” which Amy acknowledges. This implies that the government swoops in, as soon as there is any promising research on anti-gravity, and takes it for themselves/forbids further public publication of it.
- **The audience openly asks the question about inventors of anti-gravity research getting personally “disappeared” themselves which they all seem to think is a real problem.** They take it serious. The room is filled with nervous laughter. They seem to think it happens. **Amy thinks working on it in public will help, the audience disagrees.** What does “disappeared” mean in this context? Murdered? Forced to work for the secret project? Something else? We don’t know. The audience is uneasy about it.
- The “Griffin” they refer to I believe is **Michael D. Griffin**. At the time, he was the Under Secretary of Defense for Research and Engineering. He previously served for the Strategic Defense Initiative, and was the Administrator of NASA from 2005-2009. Apparently, Amy and the audience are familiar with the direct quote from Griffin, stating **“NASA is no longer, by any means, a research organization.” If NASA is not a research organization, what is it?**
- Amy and the audience both specifically, repeatedly refer to a previous Huntsville, AL based anti-gravity researcher, **Ning Li**, who “disappeared” after publicly publishing promising anti-gravity research in the 1990s.

So who exactly is Ning Li?

- **Ning Li** was an anti-gravity researcher living in Huntsville, AL in the 1990s. She worked at University of Alabama Huntsville, and theorized that **proper use of a superconductor could produce some anti-gravitational effects.**

- A 1999 "[Popular Mechanics](#)" article was written about her. In 1999 she left UAH to form the "[AC Gravity, LLC](#)," company to continue anti-gravity research (this company still exists today). This company was awarded a \$500K DOD contract in 2001, and then not much is known about it since. Publicly, Ning Li stopped publishing any further research and effectively "went dark." Nobody seemed to publicly know where she was, had heard from her... nothing. Amy even mentions this in her presentation, and nobody in the room appears to know what happened to Ning Li either.
- There was a lot of [speculation about what](#) exactly happened to her. Some popular theories included (a) that she had been killed, (b) that she had moved to China and was researching anti-gravity for the Chinese government, (c) that she was still in Huntsville, AL, and had continued her research but only sharing her findings privately for the US government/defense industry.
- From an article that came out in the "[Huntsville Business Journal](#)" three days ago, where a reporter contacted her surviving son, we now know the answer. The correct answer is (c) - she never left Huntsville, and worked on anti-gravitational research until she died in 2021, in Huntsville, AL.
- Her son confirmed "Dr. Li never left the DoD and never left the country to work for the Chinese government."
- Ning Li died in 2021 from very normal causes (**nothing nefarious at all**): complications relating to Alzheimer's. Apparently Li continued to work at Redstone Arsenal every day until 2014 when Li was struck by a vehicle while crossing the street on the UAH campus, which caused permanent brain damage, potentially leading to the Alzheimer's.
- Her son also notably commented he "**noticed change in his mom after leaving UAH for the private sector. He says all the secrecy that comes with the job began to change her demeanor and behavior over the years.**" ... "**When she was at University, she loved to publish her findings,**" he recalled. "**But after she got her top secret clearance, she wasn't allowed to share anything anymore with anyone. She became much quieter. She would return from work looking worn down with her makeup messed up. It wasn't like that when she was at the University.**"
- From the sound of it, "going dark" may not have been Ning Li's choice. **It's**

possible the DOD compelled her to work for them if she wanted to keep researching anti-gravity.

- While I know absolutely nothing about anti-gravity technology and how it relates to superconductors, the patent for the **“room temperature superconductor” LK-99 in the news this week cites** a Salvatore Pais patent for a “Piezoelectricity-induced High Temperature Superconductor.” **Salvatore Pais** is very same **U.S. Navy** scientist who patented the **UFO anti-gravity craft** and a **high-frequency gravitational wave generator**. **You can find his patents here. Notable.**
- In the 177-page document released a week ago, there’s a **statement about Ning Li** made by AATIP scientist Robert Baker. **“AATIP scientist Robert Baker** who specialized in high frequency gravitational waves (HFGW) stated he hadn’t heard from Li in “several years.” She was working on HFGWs and superconductors for the US Army at Redstone Arsenal with AC Gravity, and Baker states she “never presented them with a final report” on the contract. Baker did not know where Li went or why she didn’t finish her contract. Baker also states he is working with Fangyu Li of Chongqing University on HFGW research at this time. In 2019, Baker clarified he was on the Army’s oversight committee for Li’s contract and that Li never delivered a final report not due to nefarious reasons, but because she “didn’t quite get around to it.” Baker states he has communicated with Li since then and she “would play a role” in his current HFGW research.”

2020 “The Institute” Anti-Gravity Research Publication Blocked by NASA:

Following her December, 2018 HAL5 conference presentation Dr. Amy Eskridge did in fact launch “The Institute” doing exactly what she said it would: research anti-gravitational systems. Amy stated they had recruited several scientists from NASA Marshall Space Flight Center (located in Huntsville, AL). Over the next several years “The Institute” appears to have been making progress with their research, refining some work that had previously been done at NASA and other research facilities, and was potentially producing meaningful results.

In September 2020, “Falcon Space” was attempting to present some of their own research at the “Estes Park” conference, and Amy Eskridge [sent them a cease and desist](#) order, claiming some of the material was not approved for release due to relations with NASA. Amy’s statement about that C&D is below.

Amy Eskridge to Everyone: “Yes, I regret that I was unable to present the topic I had planned to. The theory and substantiating data I was planning to present is based on novel foundational work that was generated originally by a member of our team while a civil servant at NASA MSFC. This work has since then been further matured privately by The Institute. The foundational work done at NASA must first be approved by NASA for public release via their IP release mechanism before we can talk about our subsequent results publicly. A paper is currently under review by NASA for publication. We had hoped it would be approved in time to discuss here, but it is currently in the home stretch of publication. I expect it to be published within the next 30 days and I will be happy to distribute the publication to the group once it comes out.”

Despite the claim the paper would be available within 30 days, I have not yet been able to find that paper. From the sound of it, both Amy/The Institute and Falcon Space wanted that research out in the public domain - they wanted to present it - and NASA was holding it up/preventing its release. It’s not clear to me the paper was ever published, so if not, NASA must have permanently prevented it. **If someone can find this paper, please do, and share it in the comments.**

Amy’s Untimely Death:

Not much more research came out publicly from The Institute or from Amy Eskridge following that September 2020 cease and desist until [Amy died on June 11, 2022](#). The cause of death for Amy was not publicly disclosed, however the same Twitter account that posted the C&D posted [this tweet](#) stating

“We are still investigating the suspicious death of one of our former

colleagues from NASA Huntsville, Amy Eskridge who was found dead from a gunshot wound last Friday. Expect a follow up and some interviews once we conclude our investigation.”

That same Twitter later posts **“‘suspicious’ has been downgraded to untimely and unexpected.”** and other replies on Twitter respond that **Amy had been living in chronic-pain, stopped taking her pain medication, speculating the cause of death may have been a suicide.**

If true, that’s obviously a very sad outcome. R.I.P. Amy, and condolences to her family in all scenarios. The story would typically end there.

Franc Milburn Chimes In:

However, in September 2022, Franc Milburn, a retired UK intelligence officer, discussed on his podcast that he has been focusing his **investigations into directed energy weapon use against scientists in the UAP field.** These events are ongoing and have been reported to the highest levels of American defense & intelligence establishment. **Milburn personally knows a UAP/anti-grav scientist who was murdered.** The **directed energy weapons are responsible for Havana Syndrome; they can be deployed on trucks and are able to “fry” people through windows.**

I do not believe Franc Milburn names the anti-gravity researcher he believed was killed using a directed energy weapon. When that podcast aired though, there was a Reddit post and a commentor surfaced Amy Eskridge’s name at that time.

Last Week’s 177-Page Document (Briefing?):

Then, in the 177-page document that came out last week containing UAP history, one of the entries references this claim as well. Note, **the document claims Franc Milburn made claims about Amy specifically, when I do**

not believe he actually named her specifically on the podcast.

Nonetheless, text of that document is included below:

(PUBLIC DOMAIN) - 15 June 2022 — Dr. Amy Eskridge, the 35 year old scientist & co-founder of the Institute for Exotic Science in Huntsville, dies in Huntsville, AL. Retired UK intelligence officer Franc Milburn claims she was targeted with directed energy weapons and murdered by a “private aerospace company” in the US because she was involved in the UAP conversation and working on advanced propulsion.

In 2020, Eskridge stated she was planning to present novel foundational work regarding antigravity but needed approval from NASA. In 2018, Eskridge and her father Richard Eskridge gave a talk on behalf of their company, HoloChron Engineering, a gravity modification R&D company, in which they discuss historical and current means of antigravity experiments and modern black projects allegedly developing triangle antigravity craft like the “TR3B.” Eskridge’s colleague Dick Reeves was also involved with the Institute; her brothers Michael Eskridge and Matt Eskridge were not.

Then, none other than Ross Coulthart is referenced in that same 177-page document, on the **very last entry** in the document. It references a statement from Ross from this past February.

(PUBLIC DOMAIN) - 28 February 2023 — Journalist Ross Coulthart states on a podcast that there are people “involved in high level physics” who worked in Huntsville, AL and disappeared. Coulthart says BAE Systems deserves a very close look because of “who they’ve taken over.”

Amy is a real anti-gravity researcher who actually died. We don’t know how she died. Her death is terribly sad. I am *NOT* saying she was murdered. Please do not harass her family about this, I’m sure her family is still terribly saddened by her death.

Frankly, the speculation in the 177 page document, apparently referring to the claim made on Franc Milburn’s podcast, that she was murdered using a “directed energy weapon” seems outlandish to me. It sounds like a method

that would attract a lot of attention, and if those energy weapons cause effects similar to “Havana syndrome,” it would not be consistent with the “gunshot wound” style injury mentioned by her co-worker in the prior tweet. The only reason for using a method like that to murder someone would be to send a message to other researchers, making it very obvious to them what group committed the murder and to try to intimidate them not to disclose anything.

However, despite it being unlikely, it might still be worth researching Amy’s cause of death more.

Huntsville, Alabama seems to be suspicious, generally:

Finally, on the general “anti-gravity” and/or UAP research happening in Huntsville, AL... just yesterday a story came out stating that [Biden has declined to move the U.S. Space Command headquarters to Huntsville, AL.](#)

Apparently the U.S. Air Force leadership ran a study, and determined that relocating U.S. Space Command to Huntsville, AL was the right move. The USAF notably appears to be highly involved UAP crash retrievals, as well as blocking disclosure. If they think Huntsville, AL is the right place for U.S. Space Command, that raises the question of “why?” **Could it be that Huntsville, AL is the “Silicon Valley” of UAP, anti-gravity, and exotic defense research?** NASA has a huge HQ there, as does almost every other aerospace defense contractor. [This 2013 article](#) refers to Huntsville, AL being a “major target” for espionage, going so far as requiring the National Classification Management Society, Defense Security Service and Lockheed Martin Space Systems to host a security conference in the city. “Huntsville is a major target for foreign nationals (spies) working to obtain classified information,” FBI spokesman Paul Daymond said. Perhaps the broader Huntsville, AL economic ecosystem is a storyline worth pursuing in the near future on its own.

Ross Coulthart even [stated on a podcast](#) on July 3, 2022:

A large number of the scientists are working on what’s euphemistically called ‘the program’ in or around Huntsville, Alabama...that city has

become the focus of a very intense espionage effort by overseas spy services. It had been reported to me by not one but two sources that there've been deliberate attempts to cause injury to people who are working on the periphery of that program and there was concern that some of the people are not being adequately protected....there's a concern that basically scientists working in essentially research related to ongoing antigravitics research are suffering harassment from overseas intelligence services.

“In Huntsville, Alabama, USA there's a very black program underway that was previously run by a Chinese-American scientist called Ning Li...there is a very active anti-gravity program...I'm told there is equally an extraordinarily aggressive and nasty Chinese counterintelligence operation underway, to try to find out as much as possible through harassment and simple things like poison. There's an espionage battle underway as we speak.”

THATS SUCH A LONG POST!!! HERE'S YOUR TL;DR:

- NASA has their Marshall Space Flight Center in Huntsville, AL. Many other aerospace defense contractors have HQs in Huntsville, AL as well.
- There appears to be a large number of anti-gravity research scientists in the Huntsville, AL area.
- Those researchers appear to be almost exclusively affiliated with either NASA or defense contractors, which apparently actually spend a lot of money funding anti-gravity research, despite academia funding virtually none.
- The U.S. Air Force wanted to move U.S. Space Command to Huntsville, AL, as recently as yesterday.
- Of the researchers that are NOT affiliated with NASA/defense, if they happen to publicly publish promising results, they tend to “go dark” shortly thereafter, and stop public publishing anti-gravity research. This has

happened several times, with several different researchers, and Amy notes those instances in a presentation.

- It is speculated that many of those researchers are brought into the “black world” (secret projects) after publishing promising results, either by choice or by involuntarily (by force).
- Ning Li is an example of such a researcher, who initially published through the University of Alabama, Huntsville, but then “went dark.” According to her son, she did not enjoy going dark. It may not have been her choice to go dark.
- Amy Eskridge was trying to change this “black world” system, by creating an organization to conduct anti-gravity research in the “illuminated” (not-secret) world.
- In 2018, Amy gave a presentation on this organization, to which many of the audience members were scientists. Those scientists sounded scared/wary that they would get disappeared if they joined her in this pursuit, openly commenting on this in the Q&A.
- Amy was blocked by NASA from disclosing her research in September 2020. NASA claimed they would allow it to come out within 30 days. It never came out.
- Amy then died in June 2022. There is speculation it is from a gunshot wound, and that the cause of death may be suicide.
- In September of 2022, Franc Milburn says he knows of an anti-gravity researcher in Huntsville, AL who has been murdered using a directed energy weapon. Reddit speculates he’s referring to Amy Eskridge.
- In July 2023, a 177-page document is anonymously shared by Michael Shellenberger. That document rephrases Milburn’s claim, stating Amy “was targeted with directed energy weapons and murdered by a ‘private aerospace company’ in the US because she was involved in the UAP conversation and working on advanced propulsion.”
- That same 177-page document references Ross Coulthart stating that there are people “involved in high level physics” who worked in Huntsville, AL and disappeared. He is likely referring to Amy Eskridge or Ning Li.
- If this post is too long for you, just watch [this one segment](#) from her HAL5 conference. The audience question/her answer is notable.

[Welcome to Hack Liberty! :wave:](#)

Amy's Targeted Harassment with Directed Energy Weapons

Amy Eskridge describing how DEW can be used to damage people + mount surveillance. She was NOT off her meds... I talked to her 4 hours before her "suicide" and she was fine. We shared everything together. She was my soul mate. I talked to her three times per day minimum...

<https://x.com/FrancMilburn/status/1748537846128877779>

Newly released private messages show Amy Eskridge feared for her life

Source: [@FrancMilburn](#)

- MAY 3 Amy Eskridge sent the following message at 5:04 AM

The boots on the ground guerilla tactics are absolutely insane for any high value target that shows their face in public in Huntsville right now. I really don't think I have ever seen it be this bad before, and that's really saying something. I had heard there were new outside units deployed in town since just before the conflict started. Omg, I believe it, I can see it. The active warfare is currently in Europe, but I have seen it shockwave into the local coffee shops and bars, like it's just ridiculous to show up in public anymore if you're on a certain type of target list, like just freaking stay home. I've never seen anything like it.

- MAY 10 Amy Eskridge sent the following messages at 11:47 PM

[Amy Eskridge](#) 11:47 PM

Have always insisted there isn't much difference in our intelligence. The primary difference is the chosen field of expertise.

[Amy Eskridge](#) 11:50 PM

I could take some wild guesses at the non-Ivan countries that have been leaning in pretty hard, and I probably wouldn't be too far off base. The Russians are smart enough to not try to befriend me directly, they are more of the silently tailing on the ground types. But there are plenty others that will try to befriend you directly.

- MAY 11 [Amy Eskridge](#) 12:28 AM

That's the main thing I've seen recently. The social engineering attempts in public are through the damn roof at the moment. It's always been kinda like that around here, but it's never been quite this bad. It's almost absurd. A group of anywhere between 2-6 people will walk into a location, usually about 30 mins after I sit down. Then the whole group will take turns one at a time rotating through the empty seat next to me, repeatedly asking me the same questions over and over again. I deflect one, then the next one sits down. They even all use the same opening line between them all, as if they all read the same briefing materials. I

mean, really. Holy shit. It used to be noticeable but much more subtle. They've been pulling out this much more aggressive good cop / bad cop strategy lately. God, it's annoying. One of them aggressively trolls and insults me for no particular reason, then his buddy grabs my hand to apologize for his asshole friend and asks me if I'd like to go somewhere else to talk about it. Fuck no, I'm not walking out to the parking lot with any of you right now, stop asking me. Damn. You can all just fuck right off. What the hell is going on here? I'd say the profiling has been much more detailed as well lately, like they've been taking on character avatars that they think I'm likely to trust. Like sitting down next to me and claiming to be DIA, as if any actual DIA personell would just casually introduce themselves that way in public. Please. Damn. It's so aggressive it's just annoying. The Huntsville social scene has always been kinda like that to some extent, but it's totally unreal at the moment.

- [Amy Eskridge](#) 12:46 AM

The Israeli's though, holy shit. I personally think that they have been playing both sides between the US and Russia. I recently went to the dentist for my routine cleaning and exam. The hygienist pulled up my dental insurance information to see how often I had dental x-rays covered. She asked me how I liked my job at some company that I had never heard of. I was like... what? She showed me the information on the computer screen. My dental insurance company had my employer listed as an Israeli technology company at the MAMAT Technology Center in Haifa Israel. WTF? I do not see how that information could be entered into my records by any type of routine accidental typo. Seems like someone in Israel has been recently requesting my dental records, and they faked an employer address for me in Israel to do it. Jesus, that's just absurd. I can only think of a handful of reasons for a foreign nation state to social engineer their way into obtaining my dental records, and none of them are good.

[Amy Eskridge](#) 2:34 AM

This happened with my dentist thinking that I was employed at some technology center in Haifa Israel, and I left and immediately texted a friend about it. I was like... I have become pretty desensitized to a pretty wide variety of fucking absurd espionage bullshit. However... my dentist having records of me being employed in Israel is just a little too absurd, even by my standards. I gotta admit, I've seen a whole lot of crazy nation state shit... but I definitely did not see THAT ONE coming. This was 3-4 weeks ago. I have no clue how long ago that information was added to my records though.

MAY 12

- [Amy Eskridge](#) 1:05 AM

My dental records having my employer listed as some random company in Israel did at least trigger me to rewind and think more in depth about other times that spooky fucks have seemingly had access to my detailed diagnostics or other medical records. And I guess I had sort of underestimated how many other examples there were of this, because it's all been sort of a weird blur of pretty extreme crazy shit over the past few years. But, in retrospect, it has happened a few times now. Connected

to Isreal in the past as well. Like I met some guy for the first time, and he totally intel bombed the fuck out of me. I dunno, some guy twice my age. He told me that a bunch of people had been watching me for a very long time, and that he had personally been aware of my surveillance data for many years. He quoted me a bunch of obscure shit about my life just to prove it, even including obscure facts from my childhood. He quoted my dad's entire NASA resume to my face, even including my dad's unpublished work over several decades. He basically intel bombed the fuck out of me just to get my attention, and then issued me a 6 month ultimatum, that I had better publish our shit within that time span or his group would enagage "Plan B" and would publish all our surveilled work out from under us under a different name, and would patent it all to take all the intellectual property rights from us. He then described to me how our prototypes worked in great detail, just to prove that he actually had the surveillance. Then he ended it by telling me that I had something between my L3 and L4 vetebrae that I needed to have checked out. I did not know whether to believe him or not, other than of course he was correct about all the intel he quoted me. The only thing I wasn't sure about was whether he was right about something between my L3 and L4. But I did request my old MRI records shortly after that encounter. And there actually was something between my L3 and L4. It was in the original radiology notes that you can only get by requesting the records, my doctor had actually never mentioned it to me. But he was right. It was there, exactly where he said it would be. He was an Isreali. When I background checked him, he had multiple Vice President positions at multiple shell companies owned by George Soros, and all of those companies shared the same street address as the office for the Soros Fund Management office in New York, even down to the same suite number. And this fucking Isreali Soros guy did in fact know things from my radiology records that had never been mentioned to me. Just like my dental x-rays have apparently been pretty recently requested by some company address listed in my records as my employer in Isreal. Holy fuck. I don't know what to make of any of that, other than it all seems pretty absurd. Like I actually try to live a pretty normal life as much as I can, I really don't go into my routine dental appointments expecting to find that I have an Isreali employer documented in my records. It's just.... it's just absurd. Of course that 6 month ultimatum that he gave me, paired with that absolutely massive intel bomb that he dropped on me to prove

it, was in fact what eventually led to our work being published as a NASA technical memorandum last year. We wrote and published that paper basically as a direct result of this guy quoting to my face a bunch of obscure shit about my life, including accurate notes from my spinal MRIs, and then telling me that we could publish it within 6 months or lose it. That was actually how that paper got published. Why are there now multiple data points for Isreal being all up in my medical records, even down to my dentist? What the fuck? I just don't know anymore, and I kind of hate it.

[Amy Eskridge](#) 4:43 AM

The public approaches though, omg. It's just totally crazy shit, I swear to god. Like I should maybe just retire from science altogether and just start writing spy thriller novels about my real experiences.

- MAY 13

[Amy Eskridge](#) 5:45 AM

Oh, btw... If you see any report that I killed myself, I most definitely did not. If you see any report that I overdosed myself, I most definitely did not. If you see any report that I killed anyone else, I most definitely did not. Just like Bishop most definitely did not kill Maria and Gopi and Adriel. Just like McLandish sure as fuck did not blow his own head off with a shotgun. The dominos are being lined up all over again now...

- MAY 17 Amy Eskridge sent the following messages at 8:19 AM

[Amy Eskridge](#) 8:19 AM

It's like... god. I mean... I've recently heard confirmation that there were new GRU units that have been running around town since shortly before the Ukraine thing and causing mayhem. But I really didn't need confirmation of that, because they had already burnt the shit out of my skin with second degree burns and freaking melted the window blinds to do it in early February, which I have many pictures of. I pretty much always see this type of shit well before anyone else mentions it. I could have told anyone that

there were obviously new units in town if anyone had asked me. And I could have described their recent tactics in great detail well before anyone else knew, because I pretty much always get hit by the shittiest first wave of everything. But this new thing they have been doing is the creepiest shit I have ever seen, and that's saying a lot considering what I have seen. It's...a shit load of anonymous messages. Offering advice on how to kill myself. At night, while I'm in bed by myself. Phrased as these crazy creepy rhymes. Like: "take your pills and overdose and this will go away, take your pills and overdose and it will be ok." Like fucking creepy nursery rhymes about how to kill myself. Goddamnit, it's the creepiest shit ever. It progressed from creepy rhyming advice on how to kill myself, to eventually morphing into other crazy messages that were clearly trying to lure me out of the house at night. Like: "I'm right out here, come out to the front door, open it. Walk past the pool. I'm in the barn, come out to the barn and find me." Creepy. Ass. Shit. Creepiest. Shit. Ever. I've lived through some fucking crazy Mossad level psyops. I've had my detailed medical records quoted to my face. This new shit is the creepiest shit ever. Like what would I fucking find if I was stupid enough to walk out to our barn in the middle of the night, just because some anonymous asshole asked me to? Fuck, no, I'm not going out there, stop asking. And asking me to come out to the barn... how the cameras are currently set up... you'd see footage of me walking out to the barn by myself, and you would not see anyone approaching the barn from the back. There would just be footage of me walking out there by myself on the cameras and then maybe my parents would find me hanging from the rafters in the morning. Goddamn, I'm not going out there, no matter how many times you send me messages baiting me to. It's the creepiest shit I have ever experienced, it has totally surpassed all of the previous insane creepy shit I've ever seen. No, I'm not going to take all my pills and overdose myself, no matter how many creepy rhyming messages you send me asking me to, and I'm also not going to walk outside to the barn at night to come to you, fucking stop asking me to, goddamn it. I dunno. It's maybe the ground work to frame a suicide. Just ask McLandish. Oh wait, you can't, he's dead, of a supposed suicide. He was emailing me shortly before he died because we had both independently come to a lot of the same conclusions. Then he was dead. I'd love to know if he was being creepily taunted to kill himself before then, because it

seems familiar. Same, same. Try to get them to off themselves first, then only murder them if they don't.

[Amy Eskridge](#) 8:25 AM

Like.. Don't mention it to anyone though. Because I don't know who's doing it yet. It's the creepiest shit ever, but it could literally be anyone doing it. I don't know who it is. I'm not trying to report anything officially right now. I just want a web of people who are fully aware that I did not kill myself, because there is some protection to be had by multiple people knowing full well that you did not kill yourself. I'm not fucking walking outside in the dark, even if they send me anonymous messages taunting me to. I'm currently in a mode where I am not going to be at home alone. If my parents leave the house, I leave the house. I am not going to be here alone.

[Amy Eskridge](#) 8:42 AM

I think I MIGHT know why this particular thing is happening right now, but I still can't quite be sure, because I'm still not quite sure of "who" is doing it. It's just super creepy. The creepiest shit ever for me, which is saying a lot. It's just the same old shit, but like times a hundred. I think it's maybe happening because I just entered my next proposal and whitepaper writing phase very recently for various domestic agencies, and it's the best shit I've ever written. I think that's why now. Attempt to drive me crazy with endless shit and try to relentlessly taunt me into killing myself or try to lure me outside, BEFORE I send this newest shit to my Col at DARPA or my program director at NASA. If they can successfully taunt me into killing myself tomorrow, my most recent best work ever would die with me. I think THAT is why. But can I tell any of these agencies that I am currently being aggressively taunted into killing myself right now though? Nope, I can't. It would immediately disqualify me from obtaining any new security clearance in the future, the moment that it gets reported. Which is maybe actually the whole point of the exercise. Taunt me into reported something that gets me blacklisted from clearances. That might be the point that would achieve their goal. I don't want it to be reported. I just want the people closest to me to be able to vouch for this happening later, if something were to happen.

[Amy Eskridge](#) 8:57 AM

I dunno, it was creepy enough for me to tell several other people, like... "hey, if anyone reports that I killed myself, I fucking did not." Some of them were like... "yeah, I know, they did that to me to. Yep. Someone is absolutely trying to taunt you into killing yourself, it's real. Just don't do it." With pretty nuanced advice on how to navigate it. That's absurd. It's fucking disturbing that I can report this current thing to my inner circle of scientists in the US, and some of them are like "yep, that happened to me, they are gonna ask you to kill yourself and taunt you for awhile about it, just don't do it, those guys are assholes." What the actual fuck? Who are these fucking pricks, and how common is this exactly? What the hell?

- MAY 19 Amy Eskridge sent the following messages at 2:51 AM

[Amy Eskridge](#) 2:51 AM

After the past three days of this being relentless and almost constant... my current best guess is that some US based contracting group has been hired to attempt to harass me to death. My ex-CIA weapons guy on my team saw my hands when they were burned really badly a couple months ago, and he saw that window pane in person. He said he had built things like that, and that it was most likely an RF k-band emitter run by 5 car batteries strung together from inside an SUV. When I asked who would do something like that, and his honest answer was... "I hate to tell you this, but it's most likely domestic, most likely a contractor who sees your IP as capable of eating their lunch." That seems like the worst case scenario to me.

[Amy Eskridge](#) 2:52 AM

There's probably a pretty short list of US contractors who would do something this dirty.

- Gave me Havana Syndrome ahead of time just to make me think and tell people that it was Russia maybe even.

[Amy Eskridge](#) 3:58 AM

Even just this evening. I received a message saying that they were looking right at my best friend, that she was right in front of them. A little over an hour later, I received a text from her. She had just gone to dinner with a friend and made a point of making sure her car was locked, because she was aware of this stuff going on. She came back to her car to find it unlocked. Well, fuck

- MAY 26 Amy Eskridge sent the following messages at 1:55 AM

[Amy Eskridge](#) 1:55 AM

I dunno, that's the most likely culprit according to both my ex-CIA guy and the Ret General I work with who ran counter terrorism for STRATCOM. So they are coming from experience with these types of issues, they are familiar with the technical details of my work, and they personally know me. They both think it's a private industrial source who has hired contractors to follow me around and harass me, and have left a trail of bread crumbs to make me think it's Russia. That's their assessment. It's really not good over here right now.

[Amy Eskridge](#) 2:11 AM

I explained the recent events to my ex-CIA weapons guy, whiteboard briefed him on my most recent work and flipped him through my most recent technical notebook pages. He stared down at one page for a long time, then looked back up at me and was like "Well, THIS is definitely why. Makes perfect sense to me, well worth the budget for the right entity." Then he told me to not let that notebook out of my sight, because there's obviously a decent budget behind following me around to look for an opportunity to swipe it off a table. I was like... yeah, no shit. I've only been screaming this problem from the mountain tops and have been literally begging for help for a good long while now.

[Amy Eskridge](#) 2:13 AM

It's pretty bad when the old spooks around you start getting pretty fucking spooked.

A set of documents from her company were also released:

WHITE HOUSE OFFICE - EXECUTIVE OFFICE OF THE PRESIDENT
1600 Pennsylvania Avenue NW., Washington, DC 20500

January 30, 2019 - 3:30AM EST

To: **Scott Pace**, Executive Secretary of the National Space Council

cc: President **Donald J. Trump**, Vice-President **Mike Pence**

Due to leaks of DIRDs (Defense Intelligence Research Documents) from DIA AAWSAP (James T. Lacatski - ATTN: CLAR/DWO-3, Bldg 6000, Washington, DC 20340-5100), and exposures associated with AATIP (Luis Elizondo), critical international defense capabilities have been exposed in relation to new science applications, and groundbreaking, disruptive, emerging technologies, which must be developed first and most robustly and optimally with the United States of America and allies (Canada, and potentially all of Five Eyes, or as necessary, all of NATO). Failure at this pivotal moment could have stupefying implications for the United States of America and her allies in all major geopolitical arenas, including but not limited to global politics, finance, and national security.

No doubt there is a frantic international race to acquire the technologies displayed by the Advanced Aerospace Vehicles (AAVs) that penetrate our atmosphere, airspace, and oceans with impunity. Given the state of fidelity of modern surveillance and sensor equipment, there is no longer any way to deny their existence.

Understandably, their presence spurs every major nation's desire for such useful and dynamic abilities. The purpose of this paper is to identify these abilities, as well as to show that Geometric Energy Corporation (GEC) in Calgary, Alberta, Canada, and our partner Public Benefit Corporation in Huntsville, Alabama - the Institute for Exotic Science - are uniquely placed, equipped, staffed, and otherwise prepared to provide crucial data and insight into the topic while being uniquely prepared to deliver such crucial new technology to benefit the United States of America and her allies.

GEC has 3 main areas of value in this regard:

- 1) State-of-the-art equipment and facilities at a variety of locations as well as facility use access in relation to ongoing theoretical and experimental development.
- 2) Active research into revolutionary power, control, and propulsion systems with immense value and usefulness to the United States of America and her allies.

power for non-local "PSI" systems. Exploiting quirks of physics and consciousness to achieve offensive and defensive capabilities to address the vulnerabilities discovered by AATIP (as shown in Figure 1, i.e., slide 9 of the CMTSA Congressional briefing).

We have a variety of programs at GEC (NCAGE LOFH6) called our Advanced Research Programs (ARPs) which are analogous to a variety of DIA AAWSAP / DoD AATIP areas of interest:

///T1a-00//NCAGE LOFH6//QUANTUM

We introduce the Autonomous Quantum Computational Analysis (AQCA) program, or AQCAP, wherein Autonomous Quantum Entanglement Communications (AQEC) and Autonomous Quantum Computing (AQC) are researched in the context of:

- (i) Utilizing organic molecules in automation technology;
- (ii) Quantum tomography of negative energy states in the vacuum;
- (iii) IoT networks and post-quantum cybersecurity of legacy infrastructure;

The goal of AQCAP is to facilitate the existence of AQEC and AQC applications in the commercial aerospace and communications industries, and we are inviting collaborators to jointly work on public developments.

'QUANTUM' is also called "Autonomous Quantum Computational Analysis"

///T1a-00//NCAGE LOFH6//CLAYTRONICS

Furthering the development of programmable matter and claytronics with LDP/MELD implementations of self-reconfigurable modular robots.

'CLAYTRONICS' is also called "Programmable Matter and Claytronics"

///T1a-00//NCAGE LOFH6//CLOAKING

Manufacturing feasibility of negative gradient index optics and negative permittivity

metamaterials for invisibility cloaking.

'CLOAKING' is also called "Invisibility Cloaking"

///T1a-00//NCAGE LOFH6//DETECTTRACK

Detection and high resolution tracking of vehicles at hypersonic velocities. Determination of signature reduction, lift, propulsion, and inertial shielding of unknown TOIs.

3) A new subprogram called 'PSIKICK', inside 'OAVMC' described below, based on the major national defense vulnerabilities (of the United States of America and every other nation) created by these "Advanced Aerospace Vehicles" (AAVs) discovered by AAWSAP/AATIP and listed in Figure 1, i.e., slide 9 from the Christopher Mellon leak of the Congressional Briefing Package from TTSA.

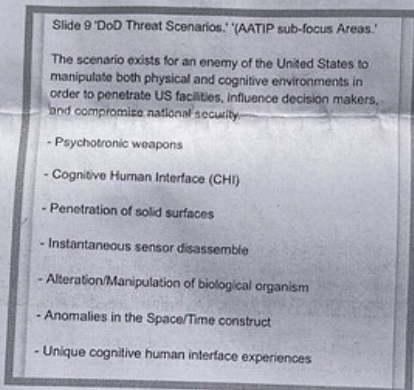

Figure 1: Slide 9 of the CMTTSA (Christopher Mellon To the Stars Academy) Congressional briefing.

AAVs have interfered with and outright disabled nuclear launch systems on numerous occasions. Captain Robert Salas, a former Minuteman missile-launch officer at Malmstrom AFB, held a press conference at the National Press Club in 2010 to address this issue, collecting more than 100 (one hundred) military eyewitness testimonies indicating AAV interference at United States' nuclear sites as recently as 2003. The event received global mainstream media coverage.

RESEARCH BASED ON AAWSAP/AATIP FINDINGS

As part of their investigations, AAWSAP/AATIP issued at least 38 research contracts in a variety of cutting-edge fields, including a to be released 490+ page report that DIA FOIA Officer Anthony Kenon provided mention of existence of in a personal communication to Geometric Energy Corporation. The research paper topics alone

which would require increased security assurances in relation to ██████//T1a-00 disclosure and an in-person discussion at WHO EOP with relevant parties to receive further information and engage with proceeding on these ARPs and ARPD reporting and disclosure to WHO EOP, including other programs and intelligence of great interest assuming the nature of the subject matter.

Sincerely,

Samuel Reid

Use of directed energy microwave weapons against Amy Eskridge

Unraveling the Bizarre Trail of Anti-Gravity Pioneers: Dr. Amy Eskridge, Dr. Ning Li, and the Missing Pieces

Archive: <https://archive.is/zxmFI>

00) Intro & Context

So I came across a video of Dr. Amy Eskridge's conference presentation on *A Historical Perspective on Anti-Gravity Technology*. While doing more research I came across a very verbose post by a previous Redditor about the topic. The post has since been deleted but is still available to read here: <https://archive.ph/O3Pgg>

I recommend reading the full post before mine, but it is long, so I am quoting their TL;DR here as a sparknotes of sorts for anyone unfamiliar with the topic:

TL;DR of Other Reddit Post (for Context):

- NASA has their Marshall Space Flight Center in Huntsville, AL. Many other aerospace defense contractors have HQs in Huntsville, AL as well.
- There appears to be a large number of anti-gravity research scientists in the Huntsville, AL area.
- Those researchers appear to be almost exclusively affiliated with either NASA or defense contractors, which apparently actually spend a lot of money funding anti-gravity research, despite academia funding virtually none.
- The U.S. Air Force wanted to move U.S. Space Command to Huntsville, AL, as recently as yesterday.
- Of the researchers that are NOT affiliated with NASA/defense, if they happen to publicly publish promising results, they tend to “go dark” shortly thereafter, and stop public publishing anti-gravity research. This

has happened several times, with several different researchers, and Amy notes those instances in a presentation.

- It is speculated that many of those researchers are brought into the “black world” (secret projects) after publishing promising results, either by choice or by involuntarily (by force).
- Ning Li is an example of such a researcher, who initially published through the University of Alabama, Huntsville, but then “went dark.” According to her son, she did not enjoy going dark. It may not have been her choice to go dark.
- Amy Eskridge was trying to change this “black world” system, by creating an organization to conduct anti-gravity research in the “illuminated” (not-secret) world.
- In 2018, Amy gave a presentation on this organization, to which many of the audience members were scientists. Those scientists sounded scared/wary that they would get disappeared if they joined her in this pursuit, openly commenting on this in the Q&A.
- Amy was blocked by NASA from disclosing her research in September 2020. NASA claimed they would allow it to come out within 30 days. It never came out.
- Amy then died in June 2022. There is speculation it is from a gunshot wound, and that the cause of death may be suicide.
- In September of 2022, Franc Milburn says he knows of an anti-gravity researcher in Huntsville, AL who has been murdered using a directed energy weapon. Reddit speculates he’s referring to Amy Eskridge.
- In July 2023, a 177-page document is anonymously shared by Michael Shellenberger. That document rephrases Milburn’s claim, stating Amy “was targeted with directed energy weapons and murdered by a ‘private aerospace company’ in the US because she was involved in the UAP conversation and working on advanced propulsion.”
- That same 177-page document references Ross Coulthart stating that

there are people “involved in high level physics” who worked in Huntsville, AL and disappeared. He is likely referring to Amy Eskridge or Ning Li.

- If this post is too long for you, just watch this [one segment](#) from her HAL5 conference. The audience question/her answer is notable.

Before we continue:

The point of this current post isn't to rehash what has already been discussed about the strange events surrounding Dr. Ning Li and Dr. Amy Eskridge; but rather explore some new oddities and missing details that arise from the information provided in the previous Redditors post.

With that said, lets dive in!

001 // Dr. Ning Li & AC Gravity

Before Dr. Li went “dark” working for the NASA/defense sector in Huntsville, she had established a company for her anti-gravity research called AC Gravity. The main LLC is located in Delaware and owned by *The Corporation Trust Company*.

It is called [AC GRAVITY, LLC](#).

A branch of that, which Dr. Li is a registered agent for, is located in Huntsville, AL.

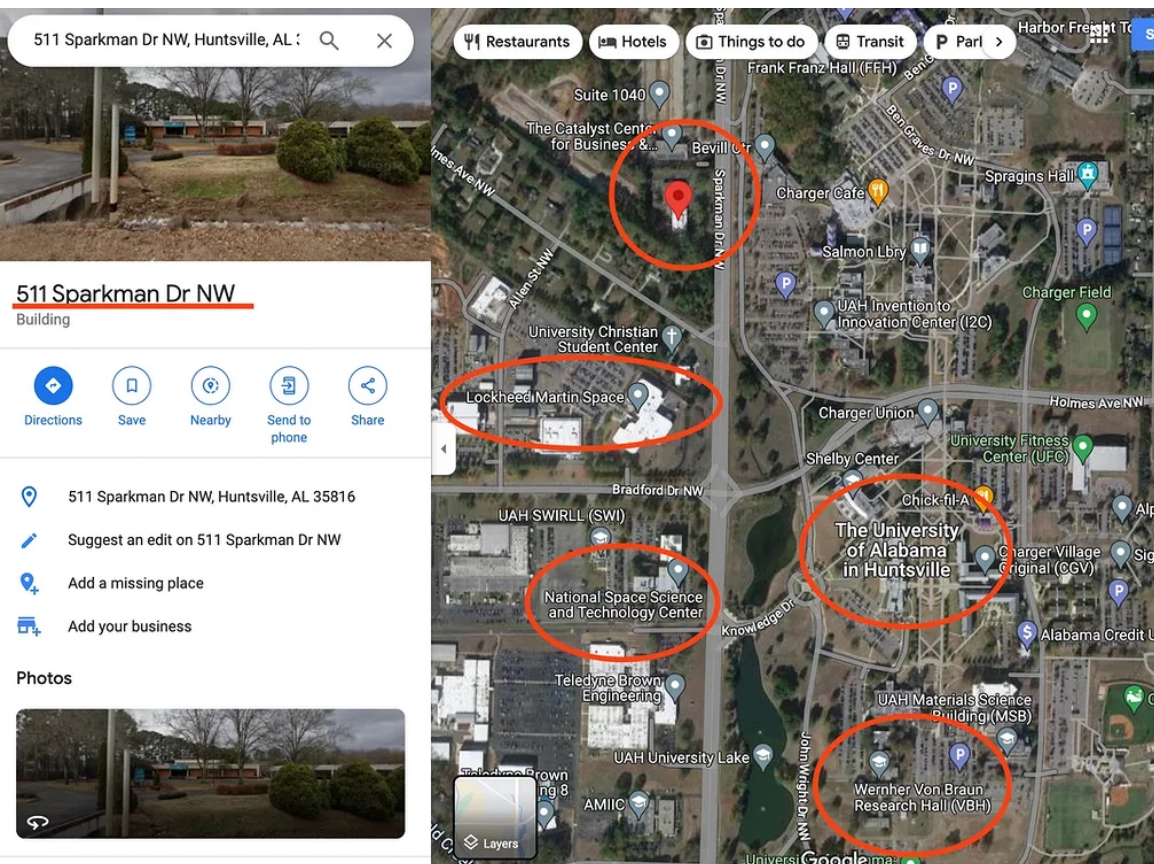

It is called [AC Gravity, LLC](#).

Both businesses are still active. [Here is where things get odd...](#)

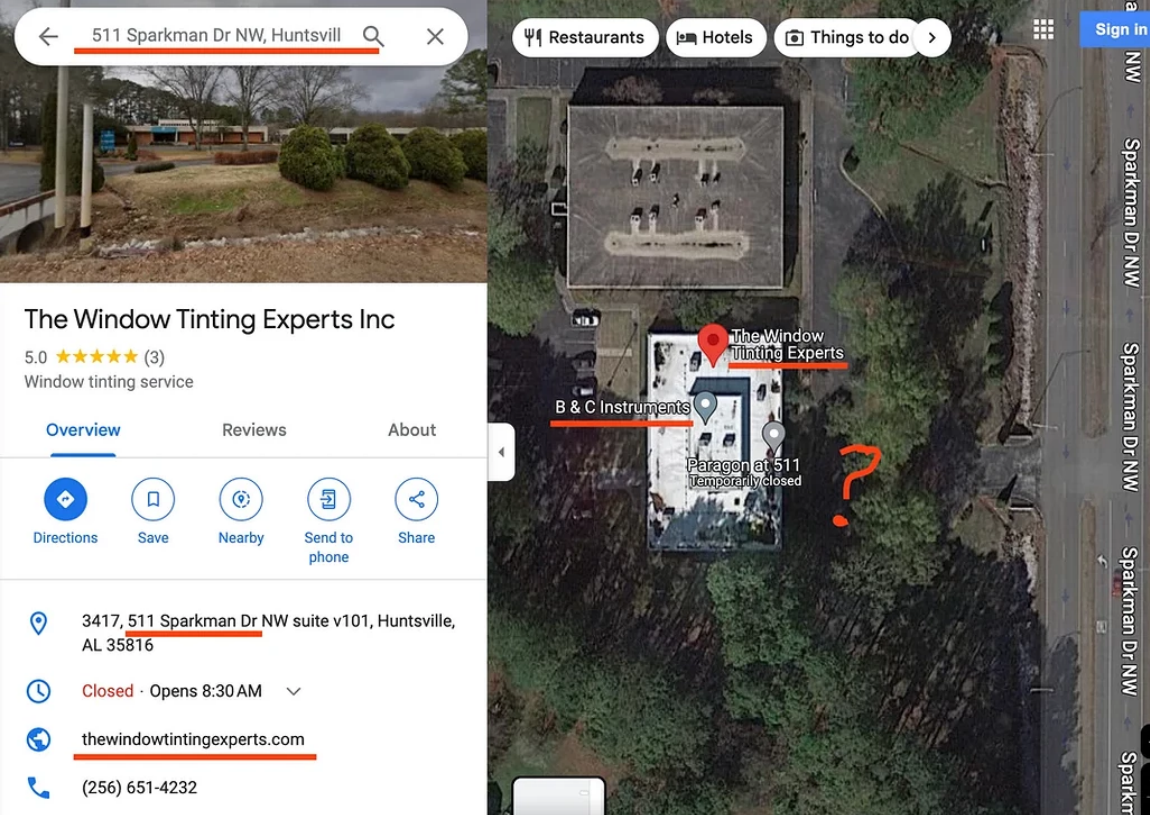

The [Registry Page](#) for AC Gravity provides an address of **511 SPARKMAN DR HUNTSVILLE, AL 35816**.

This is a view from google maps of the address and some relevant nearby areas notated:

511 SPARKMAN DR HUNTSVILLE, AL 35816 birds eye view. Lockheed and University of Alabama around the corner.

Closer birds eye view of the buildings at 511 SPARKMAN DR HUNTSVILLE, AL 35816.

Alternative street view angle.

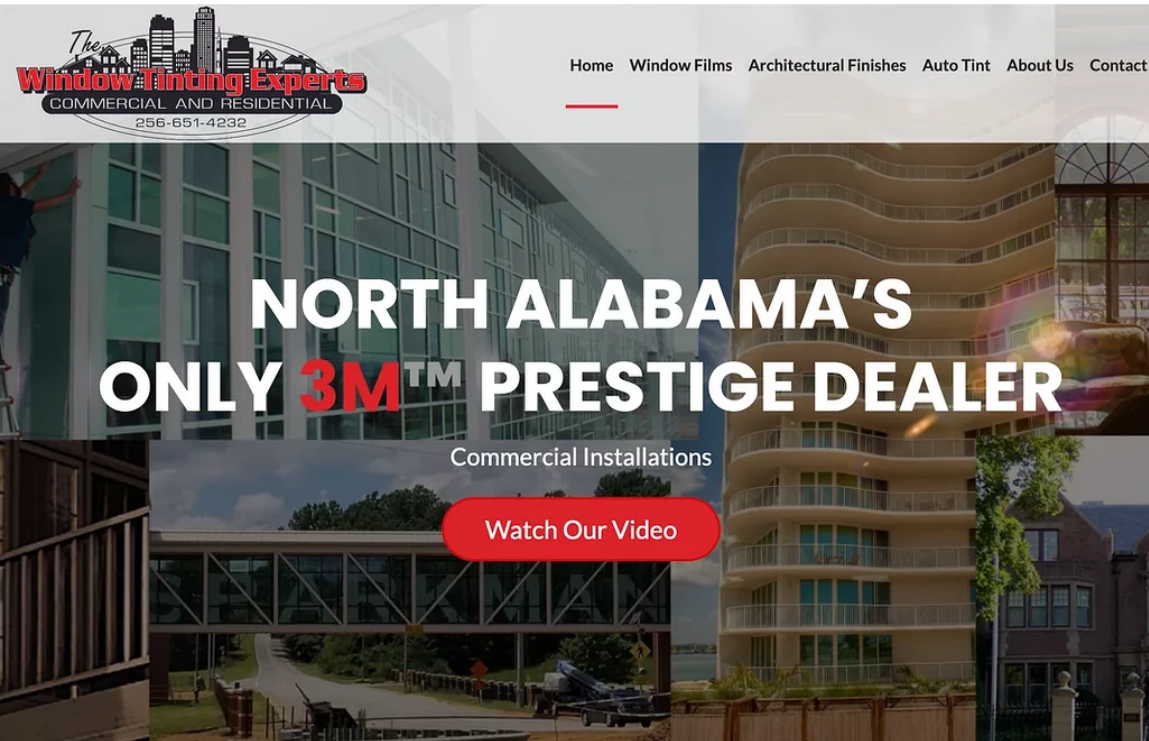

The only active business is a window tinting service called **“The Window Tinting Experts Inc”**:

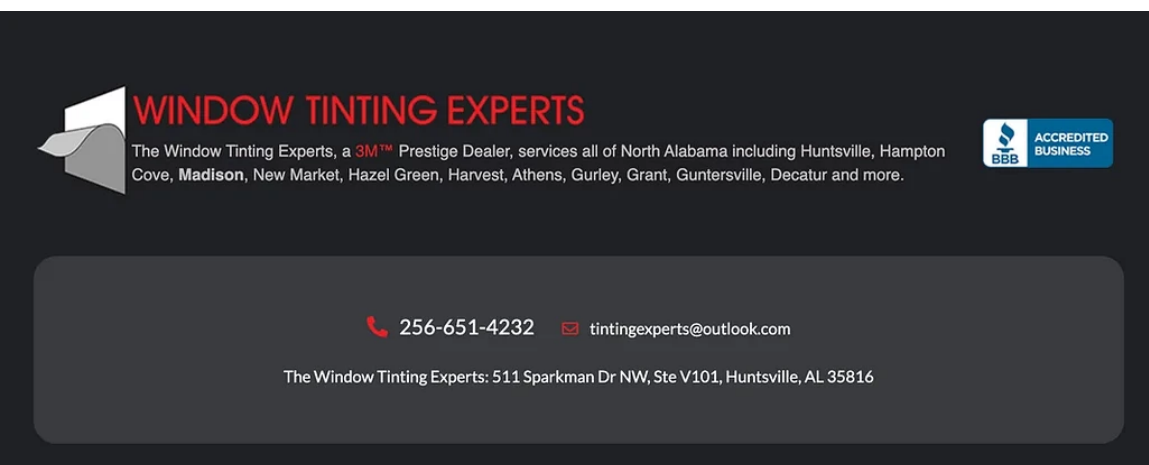

Their website listed on google maps

<https://thewindowtintingexperts.com/> / [Archive.is Link](#)

Personally, I think the site looks generic and like a template job. Maybe that's just me. (When Archiving the website it had a **TON** of elements though).

You can see at the bottom of the webpage, "511 Sparkman Dr" is listed as their address:

There is only **one** company with that name in Alabama according to [OpenCorporates](#). And according to their [Registry Page](#) and [Annual Reports](#) they have two registered addresses:

275 MINI FARM ROAD GRANT, AL 35747

2809 NEWBY RD SW HUNTSVILLE, AL 35805-4759

The Newby Address is conveniently located in the same building block as the **U.S. Air Force Recruiting Huntsville Supervisor Office**, seen here:

The Mini-Farm Address is a 40 minute drive from 511 Spark/Huntsville. **None** of the official documentation for the company has any association to 511 Spark.

The Window Tint company was also established ~2017. When we use street view to look at older dates, and go to 2016, we can see a different company is located here at that date: **B & C Instruments**

According to [OpenCorporates](#) **B & C Instruments** renamed to **R. A. Lynch & Associates, Inc.**

 **R. A. Lynch & Associates, Inc.** (Alabama (US), 20 May 1969-) Previously/Alternatively known as B AND C INSTRUMENTS INCORPORATED

From what I can gather this change happened between 2015-2016. Indicated by: the 'Recent Filings' section with a date of 14 Nov 2016, a [Cross Precision company](#) announcement from 17 Oct 2016 about acquiring B & C, along with the difference in reporting addresses when comparing their [2015](#) and [2016](#) financial reports. Very convenient timing for the Window Tint Company, which was established 15 Sept 2017. Less than a year after.

Additionally, with the exception of 1988 and 1989, according to financial reports **4317 SPARTACUS DR HUNTSVILLE, AL 35805** has been the registered address for the **B & C/R.A Lynch** company from 1990 to present.

Here's what the building looks like:

So the mystery around Dr. Li deepens.

Having a registered address of 511 Sparkman Drive for the entire 22 years he LLC has been active, the current documentation suggests that the address is only a haunt for the ghosts of other companies...

002 // Dr. Amy Eskridge & The Institute (of Exotic Science) + HoloChron

An interesting find from the earlier Dr. Eskridge chronicle is the link to her presentation slides :

<https://www.hal5.org/PDF/HAL5-Dec2018-Talk-AntiGravity.pdf> / [Archive.is](#)

The pdf is hosted by the **Huntsville Alabama L5 Society**, a space advocacy group that hosts projects and events in Huntsville. This is the last paragraph from their 'About Us' page:

Today, HAL5 have started a new life saving project, the Alabama Power Grid Defense Committee <http://www.powergriddefense.org/>, to safe guard our critical infrastructure and to ensure a spacefaring future. We are also continue to dabble in amateur rocketry and testing other hybrid propulsion concepts. Today these technologies are poised to find expression in air launched nitrous-oxide hybrid rocket powered spaceship. This is proof positive that great things can start in small organizations.

As you may see, the link for the Power Grid Defense Committee directs to an **inactive** website. There is an archive available on Wayback.

When looking at the full url for the pdf I couldn't help wondering if there might be a directory with other pdfs and... **there is!** It was there that I found this **Space Force Dinner Flyer:**

The flyer features a portrait of Dr. Peter Vincent Pry on the left, with a circular seal of the Task Force on National and Homeland Security below it. The background is a dark space scene with a satellite and a rocket launch. Text on the flyer includes: 'Space Force - YES!!!', 'A Special Dinner and Networking Event With Dr. Peter Vincent Pry', 'Executive Director of the Task Force on National and Homeland Security', 'Thursday, Aug. 9 @ 6 pm', 'Embassy Suites Hotel - Huntsville', 'Ticket information at: www.PowerGridDefense.org', and 'Event Hosted by Huntsville Alabama L5 Society www.HAL5.org'. A small HAL5 logo is in the bottom left, and 'Image: U.S. Air Force' is in the bottom right.

Space Force - YES!!!
A Special Dinner and Networking Event
With 
Dr. Peter Vincent Pry
Executive Director of the Task Force
on National and Homeland Security
Thursday, Aug. 9 @ 6 pm
Embassy Suites Hotel – Huntsville
Ticket information at:
www.PowerGridDefense.org
Event Hosted by
Huntsville Alabama L5 Society
www.HAL5.org
Image: U.S. Air Force

I was able to find another directory purely by guessing: hal5.org/HAL5/ – which is an Index of all their event fliers from 1994 to 2023. I didn't explore every folder.

My assumption is there are likely other directory's accessible with more

documents but you would need to guess the **/STRING**. From the few flyers I did look through: some events were accessible to the public, while other events were private, or hosted on a private zoom call. Some folder 'years' are missing certain flyers as indicated by absent numerical sequences (01, 02, 04, 05, etc.).

Here are two flyers that stood out:

[Technology Demonstrator Mission for Fast Solar Wind Sailing](#) (2022-07-10).

[Direct Fusion Drive for Space Power and Propulsion](#) (2022-08-04).

What is strange about Dr. Eskridge's situation is the lack of information available about her two companies: **The Institute of Exotic Science** and **HoloChron**, mainly The Institute.

HoloChron LLC was started on 19 July 2019 and Dissolved 29 December 2022. The primary Institute company was located in Delaware. It was called **THE INSTITUTE P.B.C.**.

A branch of that was located in Huntsville, AL. It was **The Institute P.B.C., Inc.**. Here is the [Registry Page](#).

The Institute still exists.

This is where it gets a bit strange again...

On [OpenCorporates](#), **The Institute P.B.C, Inc.** started the company with a man named Richard Reeves as a registered officer. Between 09 April 2020 and 27 January 2021, Richard Reeves was **removed** as an officer. Publicly, he appears to go by the name Dick Reeves (and was mentioned only **once** towards the end of the referenced reddit post from earlier) here is his [LinkedIn](#) and [Twitter](#).

On his LinkedIn, Dick lists himself as **"Vice-Chairman and Chief Operating Officer for The Institute for Exotic Science"** from Jan 2019 - Jun 2023.

On both his LinkedIn and Twitter his 'company website' is: [https://](#)

Alternatively, in Dr. Eskridge's **presentation slides**, on the final slide she says her company website is: <https://instituteforexoticscience.com>

Currently when you visit Dr. Eskridge's website, it redirects you to the website linked by Dick Reeves. **Both are inactive.**

I haven't been able to find *any* reliable archive of either website. If anyone is able to find any existing archives of either site let me know! I managed to find the **ONLY** scrappy one of Dr. Eskridge's website on [Wayback Machine](#) but it was just text from the about page of the site. However, something to note is that Dick Reeves name is **absent** from the team section (several are only visible when highlighted).

Here are the names from the '*about me*' archive:

Amy Eskridge / President

Nathan Klose / Creative Director

Shantel Butler / Research Director

Samuel Reid / Gov't Affairs Director

Richard Eskridge / Professor Emeritus, Co-Founder

Glen A. Robertson / Propulsion Technical Advisor

Paul Handy / Senior Electrical Engineering Scientist, Co-Founder

Robert E. Becker / Aerospace Engineering and Quantum Gravity Technical Advisor

Seth Wahle / Cybersecurity Technical Advisor

So the situation appears to be that Dick Reeves was **removed** from the company as an officer in late 2020, yet still seems to advertise himself as much more involved in the company than in reality, even going so far as to include the websites on both his social media profiles.

003 // Thesis & Conclusion

So what is really going on here??

We have **two** scientists involved with anti-gravity technology, one going “dark” and the other “disappearing” – but despite them both having passed away, their companies are **still existing and active, seemingly on their own**. With no physical or online presence.

I did all this research in a few hours, mainly for fun, yet slowly something began to feel off. My intention wasn't to get too conspiratorial with this, however, more and more details continued to grow amiss. Maybe I'm getting carried away and I've simply gone full tin-foil hat... but I'd like to feel my approach has been logical and objective, dealing only with the facts as they are currently available. Hopefully the discussion can maintain this same attitude.

I'd love to hear your honest thoughts on the information presented.

Do you think there is more to the story with Dr. Amy Eskridge, Dr. Ning Li, and potentially Ross Coulthart having some knowledge? (reffered in the tl;dr)

Thanks
